                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      맑
                                                       The present invention relates to a novel method for the isolation of endothelial cells (ECS), and the identification of genes expressed in normal and tumour ECS. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; endothelial cell; EC; tumour endothelial cell; TEM; NEM; Tumour endothelial marker; peM; Tumour endothelial marker; polycystic kidney disease; psoriasis; pan-endothelial marker; polycystic kidney disease; psoriasis; diabetic retinopathy; rheumatoid arthritis; tumour angiogenesis; neoangiogenesis; immune response; cytostatic; antidiabetic; gene; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carson-Walter E,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11-APR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting neoanglogenests or tumour anglogenests, for inducing an immune response to tumour endothelial cells in a patient, for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; endothelial cell; EC; tumour endothelial cell; TEM; NEM; Tumour endothelial marker; normal endothelial marker; PEM; pan-endothelial marker; polycystic kidney disease; psoriasis; plan-endothelial marker; polycystic kidney disease; psoriasis; diabetic retinopathy; rheumatoid arthritis; tumour angiogenesis; neonangiogenesis; immune response; cytostatic; antidiabetic; gene; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; ds.

```
The present invention describes a method for detecting a pancreatic CC cancer-associated transcript in a biological sample. The method comprises CC contacting the biological sample with a polynucleotide that selectively CC hybridises to a sequence at least 80% identical to a sequence as shown in any one of Tables 3 to 25 in the specification or having the GenBank Accession Number AF279145. Also described: (1) diagnosing pancreatic CC cancer in a human or animal subject being tested, determining the CC likelihood that a subject having a pancreatic cancer will survive, or CC determining the suitability of a subject having a pancreatic cancer for CC surgical resection therapy; (2) detecting a pancreatic cancer associated polypeptide in a biological sample; (3) determining the likelihood that a CC subject having a pancreatic cancer associated cancer of a therapeutic treatment of pancreatic cancer. A pancreatic cancer associated in CC gene and protein therapy. A pancreatic cancer cancer. A pancreatic cancer associated polypeptide or an antibody that binds to the isolated polypeptide can be used for diagnostic methods are useful for the polynucleotide, an isolated polypeptide or an antibody that binds to the isolated polypeptide can be used for diagnostic methods are useful for the early detection of pancreatic cancer or the prognosing or prognosing pancreatic cancer. The prognostic or cancer or the metastases, and for monitoring the polynucleotide, an isolated can be used in the metastases, and for monitoring the progress of disease such cancer or its metastases, and for monitoring the progress of disease such cancer cancer or its metastases, and for monitoring the progress of disease such cancer cancer cancer cancer. The prognostic cancer c

CC protein genes, and AARD1436-AARD1513 represent the proteins they encode. CC protein genes, and AARD1436-AARD1513 represent the proteins they encode. CC AARD1514-AARD1544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing, treating CC or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the CC pathological conditions can be diagnosed by determining the presence of mutations in CC the new genes. Specific uses are described for each of the 28 genes, cander the tissues in which they are most highly expressed, and include CC developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, cancer the condition of the immune system, AIDS, autoimmune CC diseases (e.g., rheumatoid arthritis), inflammation, allergies, cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease), CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g., cardiovascular disorders, atherosclerosis, cardiovascular disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; fumnume system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Albeimer's disease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; gastrointestinal disorder; promancy-related disorder; cell culture; chemotaxis; food additive; gene therapy; binding partner identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              05-NOV-1999; 99US-0163581P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                angiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., redicinmunoassays or enzyme linked immunosopant assay (RIISA). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig mutated fusion DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor h-lik domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWF.

Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This sequence encodes a fusion protein comprising mouse TANGO197 and immunoglobulin (Ig) that can be used to treat exposure to or prevent a symptom of anthrax.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1674 BP; 433 A; 461 C; 424 G; 356 T; 0 U; 0 Other;

                                                 The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig FCR mutated fusion DNA of the invention.
                                                                                                                                                                                                                                                                                                               New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-JUL-2002; 2002US-00201292

                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel fusion polypeptide comprising a von willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or amellorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig FCR wild-type fusion DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or amellorating symptoms of anthrax comprises a von Willebrand factor A-like domain (VWF) amino acid sequence and an amino acid sequence heterologous to the VWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (ROTT/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This sequence encodes a fusion protein comprising human TANGO197 extracellular region, minus the DG residues closest to the transmembrane region, and immunoglobulin G (IgG) fragment of crystallisation (Fc) with mutations L235A and G237A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (WF) amino acid sequence and an amino acid sequence heterologous

The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This sequence encodes a fusion protein comprising human TANGO197 extracellular region, minus the DG residues closest to the transmembrane region, and immunoglobulin G (IgG) fragment of crystallisation (Fc).
